

TFT_Test.EXE

TFT_Test.Exe is sample program which shows different possibilities of LLT/LWT/LFT/WLT/WWT/WFT Price Checker. It communicates with Price Checker via UDP port number 1001. Because of this UDP port must be unblocked for proper work of Price Checker.

Test database is stored in towary.ini file.

Syntax of towary.ini file:

In field [xxxx] there is barcode of product stored.

Meaning of fields:

mode

1 – TFT_Test sends sequence with separated name and price. Name will be displayed in top line, price in the centre of the display (greater font), price will be spoken (it depends on setting „Sound voice”); below the price there is place for additional text (e.g. promotion)

2 – TFT_Test sends two lines (each maximum 20 characters),

3 – TFT_Test sends two lines (each maximum 24 characters),

The way of displaying when ***mode*** is set to 2 or 3 depends on setting „Price detect mode”. This setting is related to compatibility with previous models of ELZAB’s Price Checkers:

- if „Price detect mode” is switched off: in ***mode*** equal 2 Price Checker displays 2 lines of text
in ***mode*** equal 3 Price Checker displays 3 lines of text
- if „Price detect mode” is switched on: if Price Checker detects price it displays like in ***mode*** equal 1; price must have 2 points after comma; before price it must be space

line1

first line to display (field valid if ***mode*** = 2 or ***mode*** = 3)

line2

second line to display (field valid if ***mode*** = 2 or ***mode*** = 3)

line3

third line to display (field valid if ***mode*** = 2 or ***mode*** = 3)

signal

0 – no signal

1 – confirmation signal (single beep)

2 – error signal

(field valid if ***mode*** = 2 or ***mode*** = 3)

time

time of displaying information (in seconds) from 0 to 99 (0 - means continuously to next barcode, 1 – one second, 2 – two seconds, etc)

(field valid if **mode** = 2 or **mode** = 3)

name

name of product (max 20 characters) – field valid if **mode** = 1

price

price of product (max price is 999999,99) – field valid if **mode** = 1

currency

name of currency (max 3 characters) – field valid if **mode** = 1

graph

name of bmp file to display after information about product – field valid if **mode** = 1

graph_t

time of displaying bmp defined in **graph** field– field valid if **mode** = 1

sound

name of wav file played after information about product – field valid if **mode** = 1

attr1 to **attr3**

if additional bitmap should be switched on; – field valid if **mode** = 1

add_txt

additional text (in the bottom of display) – field valid if **mode** = 1
